PIPING & CONTAINMENT SYSTEMS

WATER-RESISTANT TANK SUMPS

With liquid removal from sumps costing station owners millions in maintenance costs every year, wouldn't it be nice to offer a solution designed specifically to keep liquid out of the sump?

Now you have a water-resistant sump solution.

KEEP WATER OUT

The APT™ brand water-resistant tank sump saves you from the hassle of sump liquid removal with its superior lid design.

WATER-RESISTANT SUMP LID

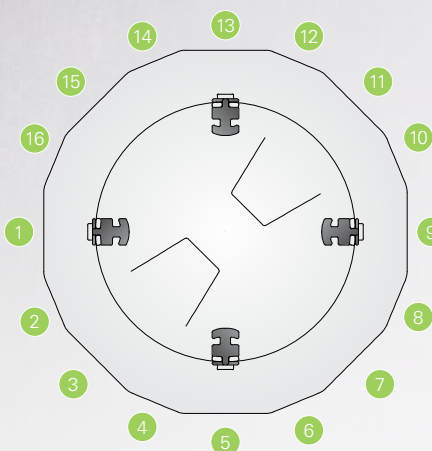

The water-resistant design of the gasketed sump lid is critical to keeping liquids out of the sump.

- Four integrated hold-down lid toggles provide compression between the lid gasket and the riser, preventing liquid from entering into the sump.
- The lid toggle pegs are molded into the riser and do not penetrate the lid or riser, eliminating these areas as potential leak points.

ENSURE 90° PIPEWORK ENTRY

16 flat surfaces around the sump base provide an ideal entry surface for pipework.

- These 16 flat surfaces help to facilitate proper 90° sump entry for pipework from multiple angles.
- A proper 90° entry into the chamber is necessary to avoid creating stress on the pipe entry which can weaken the system over time.

FIELD HEIGHT ADJUSTABLE

The height of the sump riser can be cut down in the field to meet the varying needs of different installation applications.

- Accommodates unforeseen on-site grade level changes to ensure installation is kept on schedule.
- Minimizes the need to stock multiple chamber height options.
