PRESSURE/VACUUM VENTS WITH **IN-LINE VAULT**

TANK VENTING

PRESSURE/VACUUM VENTS WITH IN-LINE VAULT

SUPERIOR QUALITY, SAFE SERVICING, & MAINTENANCE

With typical Pressure / Vacuum (P/V) Vents only lasting a single 3-year test cycle, Defender Series® P/V Vents are built to outlast other vents in their class, providing precision regulation of storage tank pressure for the long-haul. Their UV-resistant and high-grade polymer materials, coupled with the game-changing safe and protective in-line vault, delivers a premium tank venting system designed and tested to last.

PRECISION TANK VENTING

The premium construction of the internal rolling diaphragm delivers consistent and controlled cracking for both low leak and high pressure conditions. Ensure your tank venting system is tight and dependable in any pressure condition.

SAFE MAINTENANCE AT GRADE LEVEL

Almost half of all injuries in our industry come from falls at height. The in-line vault promotes safety for the service technician by bringing the P/V vent down to grade level. No more expensive and potentially dangerous lift truck required, no more wrenching at height.

IN-LINE VAULT

The in-line vault allows for safe, cost-effective grade level testing and maintenance while also providing extreme protection from the outdoor elements. The cast iron construction, security bolts, and stainless steel faceplate guard the P/V vent while the integrated drain helps to clear the vault of any condensate.

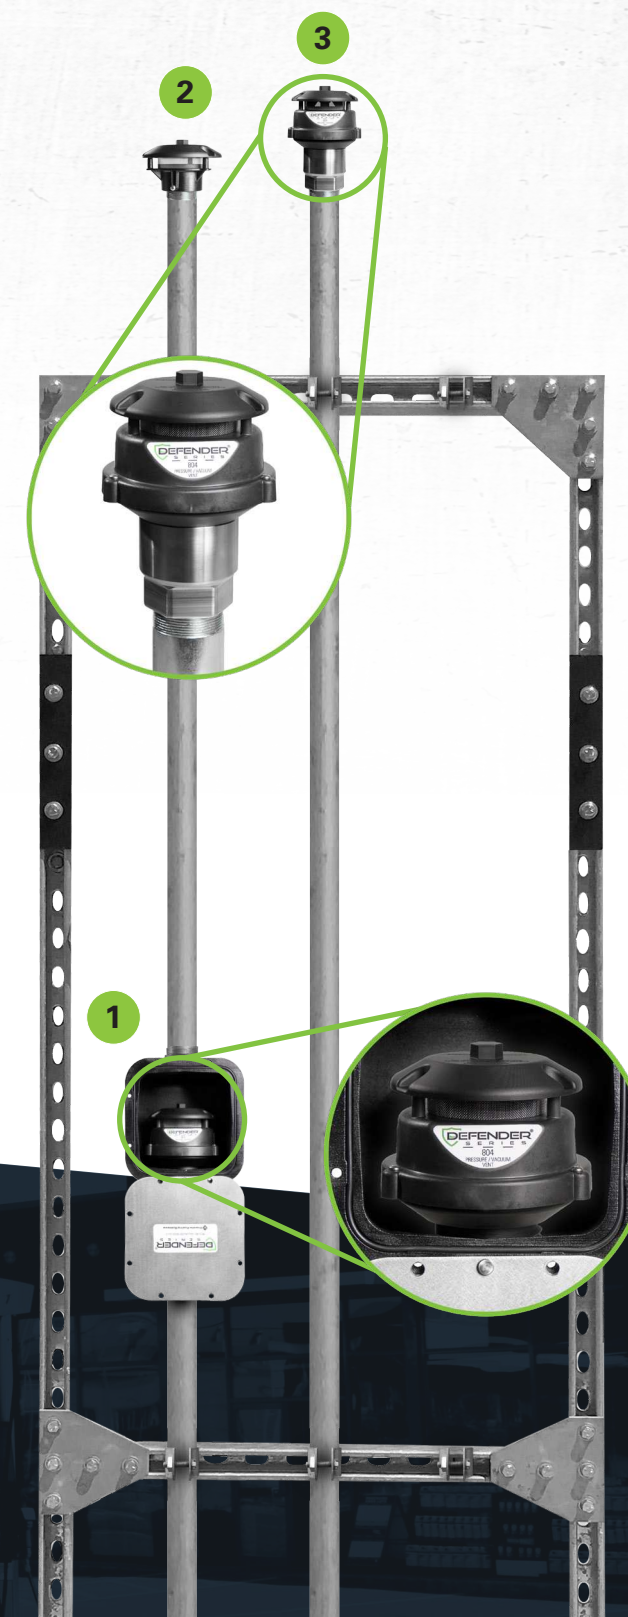

Patent Pending

UV-resistant rain covers protect vent lines and storage tanks from water intrusion while the wire mesh debris screen keep dirt, insects, and animals from disrupting the venting system.

VERSATILE INSTALLATION CAPABILITIES

- Install in-line at grade with the **1** vault and **2** rain cap or end-of-line with the **3** Defender Series® vent stack adapter.

One-turn seating of the P/V vent with no tools required means fast and easy installation and inspection.
