

Contactless card reader

FILLSMART

ATTENDANTS AND PAYMENTS MANAGEMENT

FEATURES

- Automated management and control of all attendants
- Automated management and control of all fuel dispensing operations
- Fuel attendants gain access to their permitted operations by using a contactless card
- A FillSmart kit is installed on each side of the dispensers for faster service
- Real-time activity logs on all attendants' operations
- No dispensers with nozzles "open"
- The MAC 4.0 OPT independently manages all FillSmart operations
- Real-time interactive price management
- Built-in, automated, customizable end-of-shift and end-of-day reports

The FILLSMART kit includes an RFID reader, which is positioned on each dispenser side and all attendants are equipped with contactless SECURITY cards. Each attendant is assigned certain permissions and limits of the operations they can perform. The system ensures the accountability of every action on the forecourt, keeps secured logs and facilitates the end-of-shift operations, reporting and reconciliation.

Contactless card reader

FILLSMART

FillSmart is a unique MASER solution, which allows the petrol station management to secure complete automated control on all forecourt operations and events, related to the fuel product retail process and the corresponding payment transactions. FillSmart empowers you to design and shape your forecourt processes and events with the highest possible level of security, regarding the functions and permissions assigned to each attendant. FillSmart keeps detailed and secured logs of all attendant transactions.

At the end of each shift/day the station manager can run end-of shift, end-of-day reports and cash flow reconciliation reports for the whole station and for each attendant.

The integrated packaged solution of FillSmart and CardSmart empowers the forecourt management to include complete automated control on the client side. With CardSmart you can define any type of industry-standard pre-authorization rules. You can define, monitor and manage your own loyalty cards, discount cards and other custom fuel card programs. This packaged solution will give you complete control and accountability of all fuel retail activities. You will have full accountability of your cash flow, transactions flow, client and attendant actions. The system keeps detailed and secured logs of all attendant and client related transactions.

ADDED VALUE

- Fully automated forecourt operation with no distinction between 'attendant-island' and 'self-island'
- Attendant identification technology, which optimizes, secures and speeds-up the "attendant" service mode
- Dispenser-vendor-independent technology
- Fast and seamless interface with all existing and legacy dispensers
- 100% fraud and human error prevention
- Flexible, modular integration

MASER's FILLSMART solution allows the petrol station owners to get the next level of automation and security of their forecourt operation control. The application of contactless cards reduces the possibility for fraud and human errors to zero.
