

Fleet Management System

MUVI

Mileage and working hours control

CHARACTERISTICS

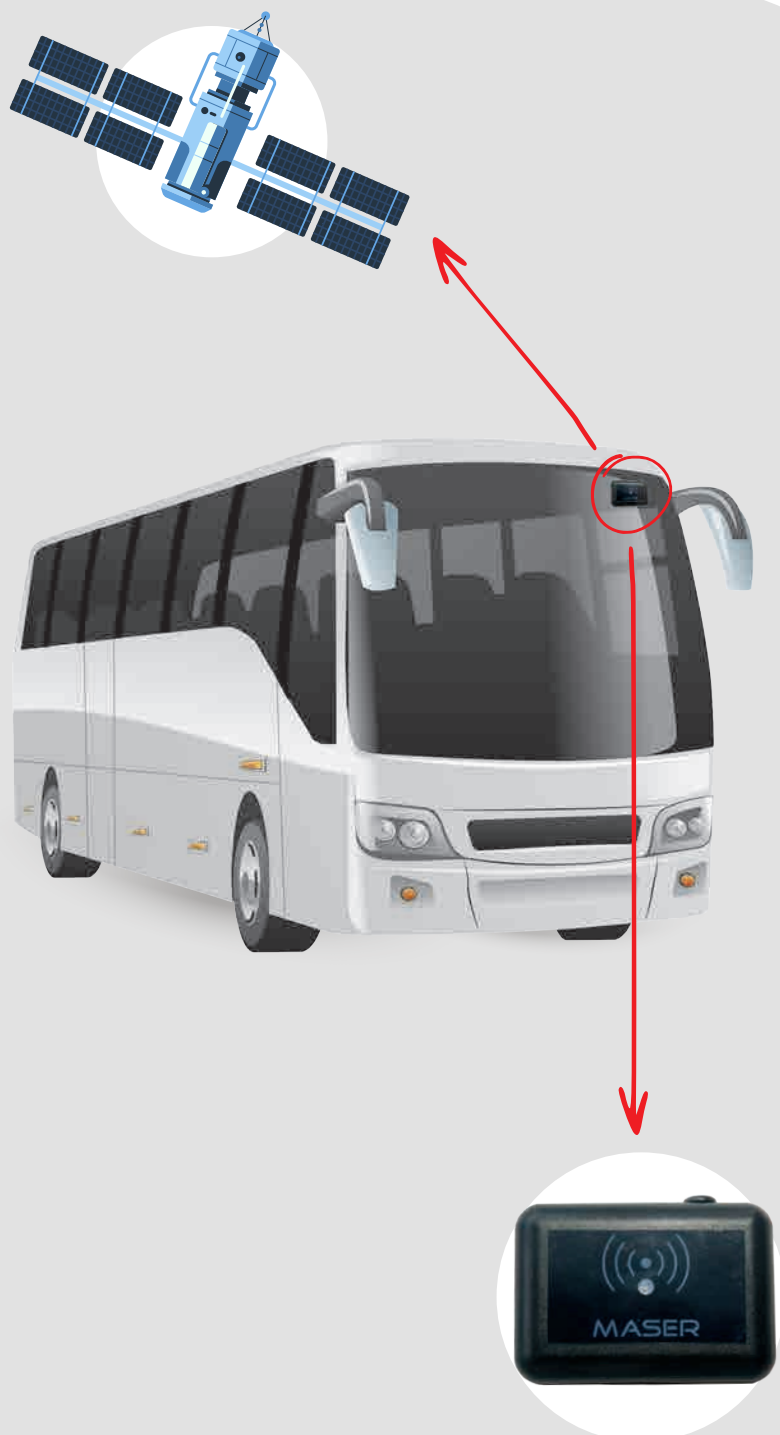

- Easy to install. It only requires the power supply, that is taken from the vehicle;
- No connection to tachograph, Cambus, odometers, ecc;
- Small sized unit, 80 x 60 x 25 mm;
- Very high accuracy in the detection of the mileage and of the working hours;
- Completely autonomous unit: no interaction is needed with the driver or with the forecourt operators.

FASI DEL PROCESSO:

1. The vehicle where MUVI system is installed approaches the refueling area. MUVI automatically transmits the information regarding mileage and working hours to the Mac Fleet Unit.
2. At the end of the refueling operation, the information are transferred to our Cardsmart Fleet 4.0.

Our MUVI system is a device that, once installed inside the vehicle, enables the recording of the mileage and of the working hours for every single route.

ADDED VALUE

- ➔ Certainty about the detected information (mileage-working hours).
- ➔ Easy to install.
- ➔ Complete reporting about the use and consumption of the vehicle.
- ➔ With an interface for all the internal maintenance management systems.
- ➔ MUVI units can be reutilized.

The MUVI system utilizes the latest technology of vehicle tracking, combining very high performance levels together with the highest accuracy in terms of detected mileages and working hours.
